

# What's Working:

## Invasive Species Control

February 2015

### Common Reed Grass Control

- I wanted to let you know about a nice, recently-launched Phragmites website: Great Lakes Phragmites Collaborative <http://greatlakesphragmites.net/>. It has lots of information on Phragmites biology, management, and on-going research. For example, there is interesting research about disrupting the symbiotic microbes associated with Phragmites <http://greatlakesphragmites.net/control-options/> (Laura Van Riper, Minnesota Department of Natural Resources).
- Application of aquatically certified glyphosate or Imazapyr to upper foliage during flowering, mowing or prescribed burning in the spring followed by additional herbicide treatments as needed ([http://www.michigan.gov/documents/deq/deq-ogl-ais-guide-PhragBook-Email\\_212418\\_7.pdf](http://www.michigan.gov/documents/deq/deq-ogl-ais-guide-PhragBook-Email_212418_7.pdf)).
